- ⚡ Cost control analysis
- ⚡ Document control

PROFESSIONAL SERVICES

Photos from a reliability project in and around Rochester, NY, worked on by the RMS Professional Services team.

This project included building a new greenfield substation and expanding another, while installing three new TL circuits, terminating at two additional subs and upgrading system relay and protections systems at two more substations; and a TL interconnect with another utility. A 345kV/115kV/34.5kV and 02 transformers were constructed, commissioned and energized. Two 115kV underground and overhead transmission lines were also installed.
